

1: Tokens
2: vector embedding

Number of input fixed: one neuron ke pass kitne weight honge

10K token context window : 10K*768*10k(number of token in first layer)

I only support english words:-->
2 Million word honge?

Saara data leke aagya: 2 Million
unique word ko pick kiya

set: { . 2 Million word }

2Million token* vector embdding: space

"adiv": 0
"harsh": 1
"

2Million* 10K = 2000 crore number store karna padega

2000crore*8byte of memory

Asccii character
256:

50k token hi apne system mein lunga

0-255

Internet data leke aaya

avinash

word: counting

token assign kar sakta hu-->

top50K counting high honge

256 to 50255
