1: MongoDB setup
2: Middleware
3: Authentication

1: UptoDate

v6:

Handler agent of latest libraries

v5.2.1

Break Down Changes

+ Real world Implementation

v5

fileStructure:
schema
coder writer agent

Human ho: MongoDB: v5

Changes:

MongoDB: v6:

50 file mein
code likh chuka hu:

50*100 = 5000 line of code

500 line

Check the bug in the code

Testing

Docker

backend
frontend
DB

RAM
HDD

Breakdown changes

New Changes

v5

int mul(int a, intb)
{

return a*b;
}

mul(2,3)

int sum(int a, int b){

return a+b;

}

sum(2,3)

sum(2,3)

v6:

int sum(int a, int b, int c)
{

return a+b+c;
}

int sub(int a, int b)
{

return a-b;
}

int mul(int a, intb)
{

return a*b;
}

mul(2,3)

Middleware, authentication

task: 3.4

: Is data ko save kar do database ke andar

function auth(user){

100 line of code

}

auth

user

folder ke andar persent hai:

50 file code

Database

vector

sql/no sql

function name, argument, return

state:
{
react:{

}

signup

}

Test cases

Formula create kar sakte hai: Normal coding

Input-->function(x) --> Output

2 20
3 30
4 40
5 55
7 70

marks = 10*Hours

Input

function(x)

Output

100 Million --< achieve

Anthropic:

Data train

function()

Noisy data

Private: Anthropic

Human bhut jaada

Deepseek

API Key

US: (Chips)

Input

[0.84,0.16]

Deepseek: 10 Million Input

Output: 10 Million Ouput

Rohit Bhaiya: Java

paiso mein

Gemini:
OpenAI:
Claude:

US Army:
