

Title: The Tech Stack Universe

Frontend Frameworks:

React is a JavaScript library created by Meta. React is primarily used for building dynamic User Interfaces (UI).

Vue.js is another progressive JavaScript framework. Vue.js is known for being lightweight and easy to learn.

Backend Technologies:

Node.js is a runtime environment. Node.js executes JavaScript code outside a web browser.

Express is a minimalist web framework. Express is built on top of Node.js to handle server routes.

Django is a high-level Python framework. Django is designed for rapid development of secure websites.

Databases:

MongoDB is a NoSQL database. MongoDB stores data in flexible, JSON-like documents.

PostgreSQL is an advanced relational database. PostgreSQL uses SQL for querying structured data.

Connections:

A typical MERN stack connects React, Node.js, Express, and MongoDB.

A full-stack developer often uses React for the frontend and Node.js for the backend.
